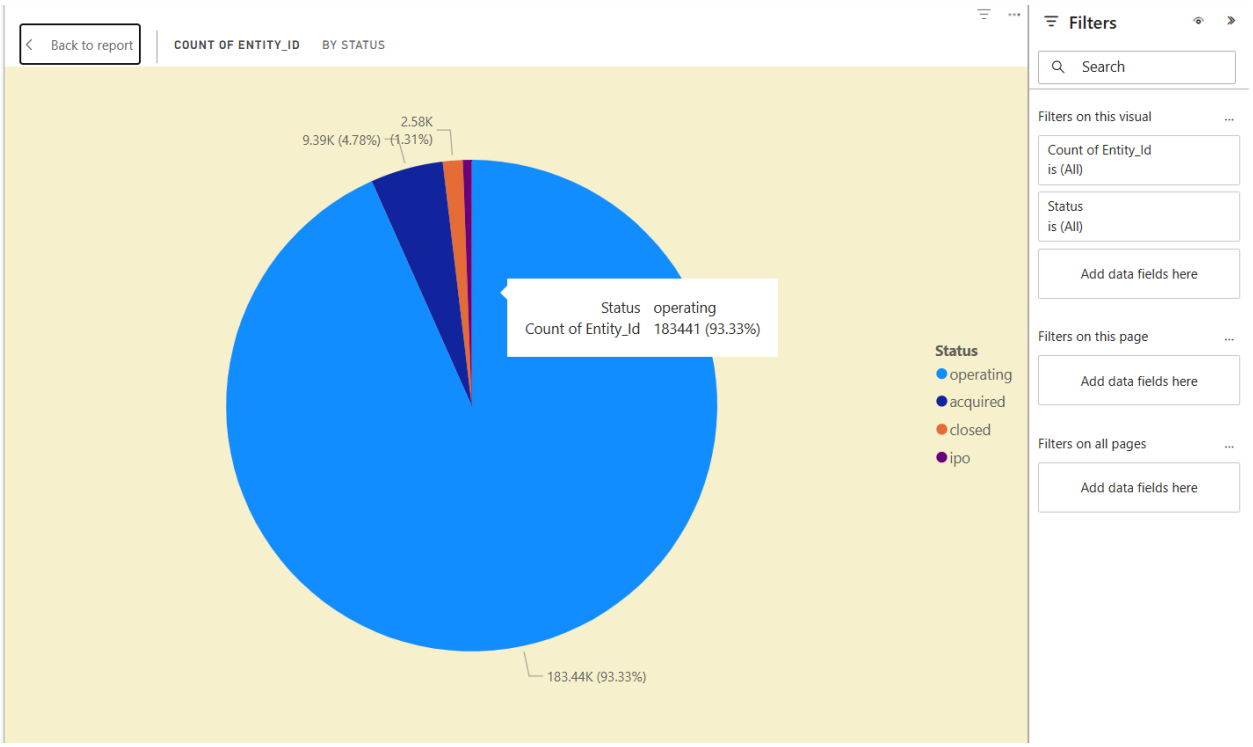
Startup Overview & Investment Trends Report

1. Entity Status Distribution

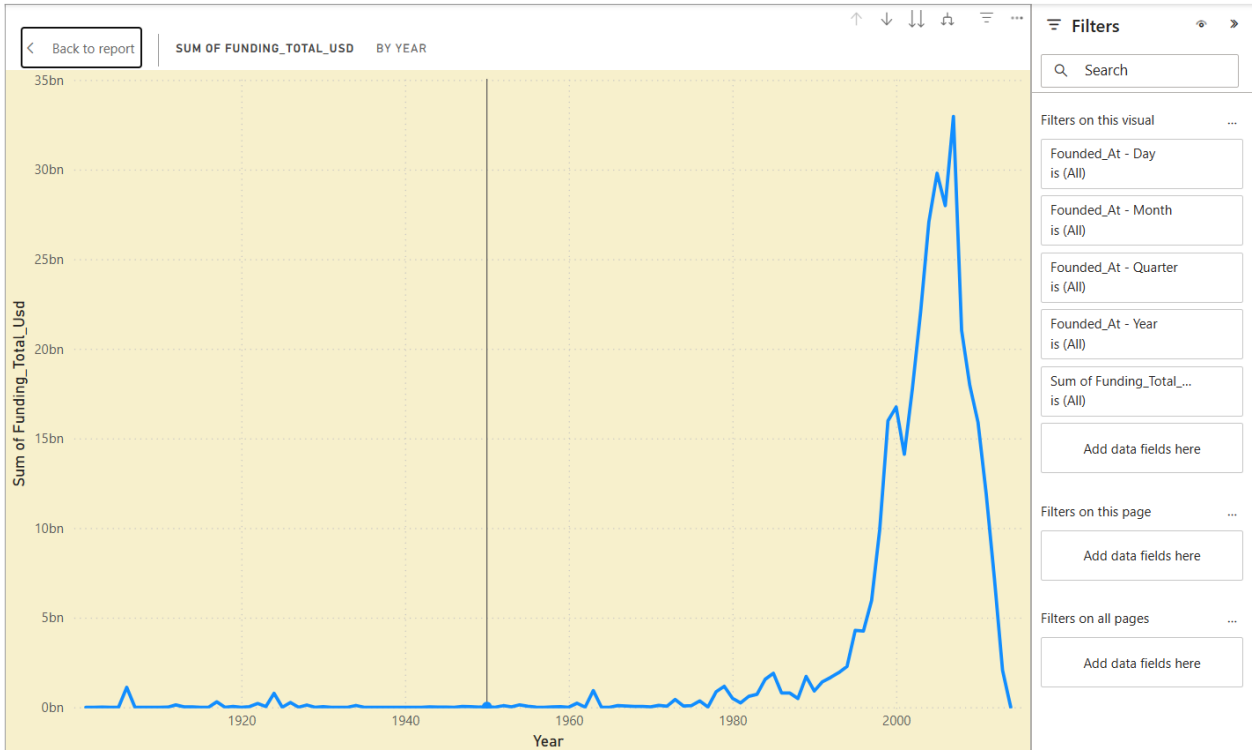
- **Pie Chart Title:** *Count of Entity_Id by Status*



- **Insights:**
  - A vast majority of startups (93.33%) are **operating**, with a count of approximately **183,444**.
  - Around **9,390** entities (4.78%) have **closed**.
  - A very small portion of entities are **acquired** or have gone through **IPO**.
  - This suggests a healthy startup ecosystem with a high rate of operational continuity.

2. Historical Investment Trends

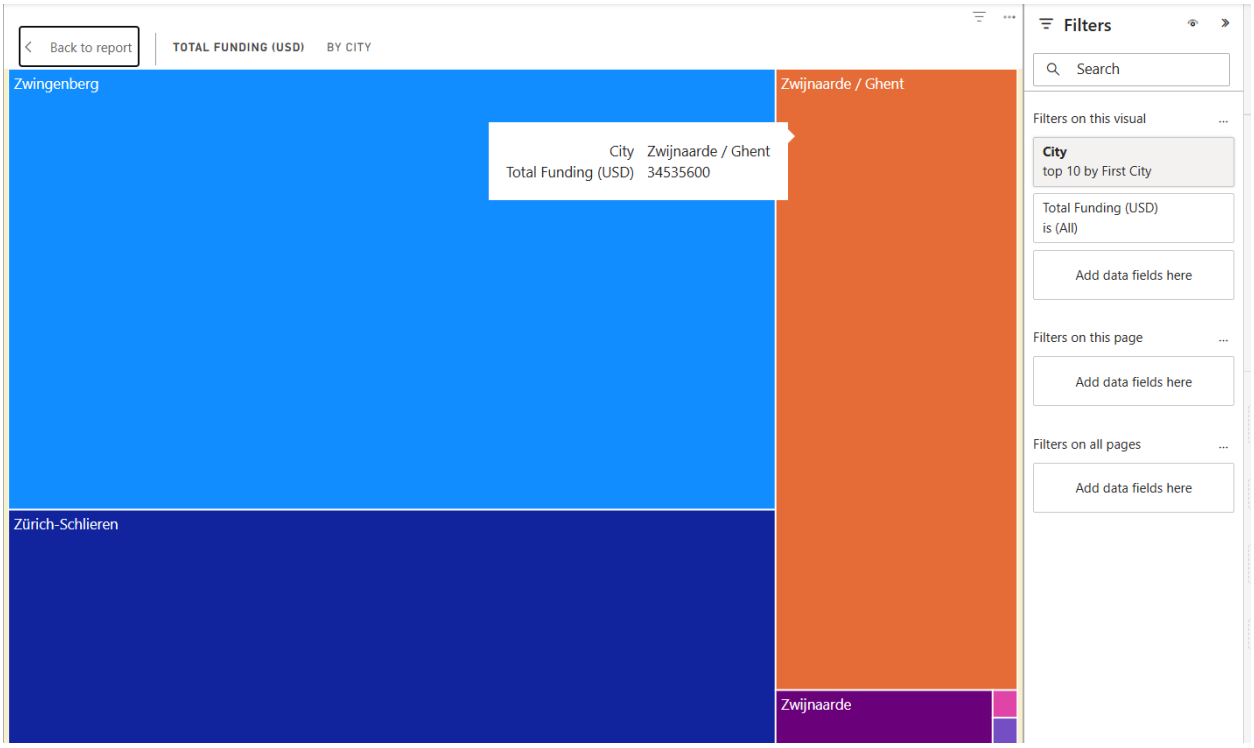
- **Line Graph Title:** *Sum of Funding_Total_Usd by Year*



- **Insights:**
  - Minimal funding activity before the 1980s.
  - Noticeable upward trend begins around the mid-1990s.
  - Investment peaks around **2010–2015**, with total funding nearing **30 billion USD**.
  - There is a sharp decline in funding after the peak, indicating potential market saturation or economic shifts.

3. Top Cities by Investment

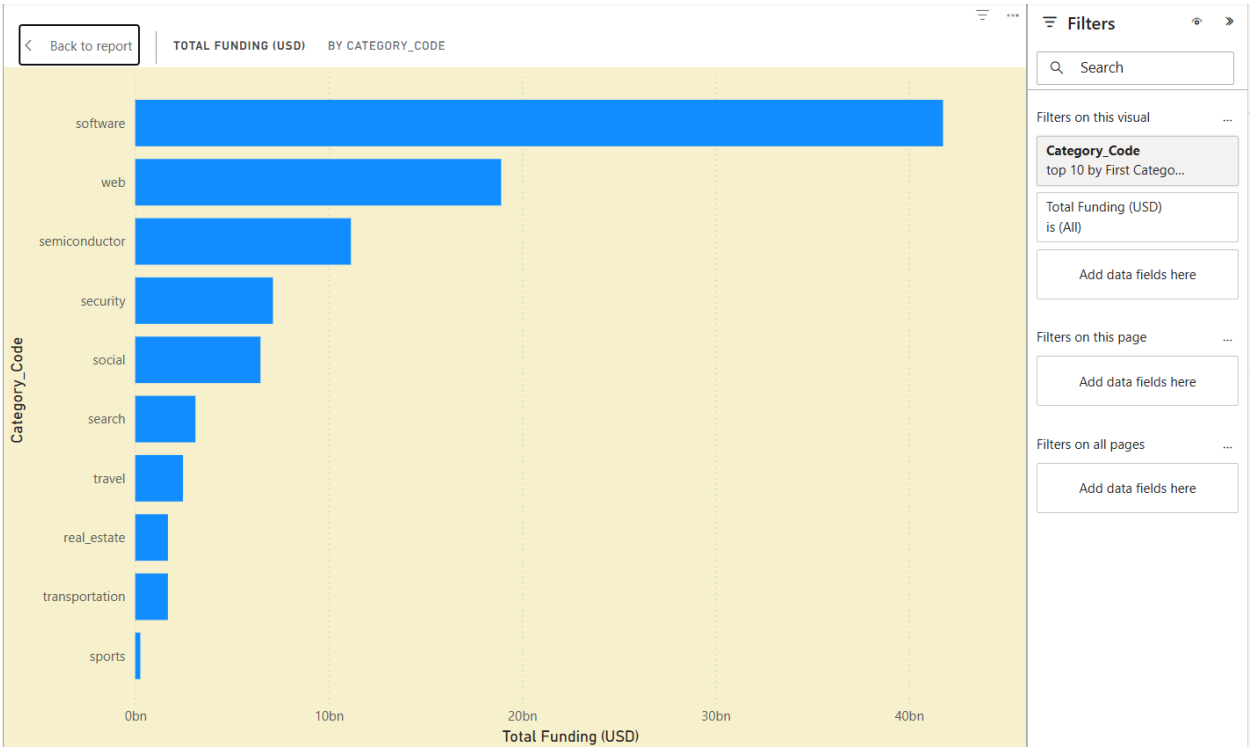
- **Treemap Title:** *Total Funding (USD) by City*



- **Insights:**
  - **Zwingenberg** received the highest total funding.
  - Followed by **Zürich-Schlieren** and **Zwijnaarde**, indicating a strong startup presence or major individual investments in these cities.
  - Funding is concentrated in select cities, highlighting regional investment preferences.

4. Funding by Industry Sector

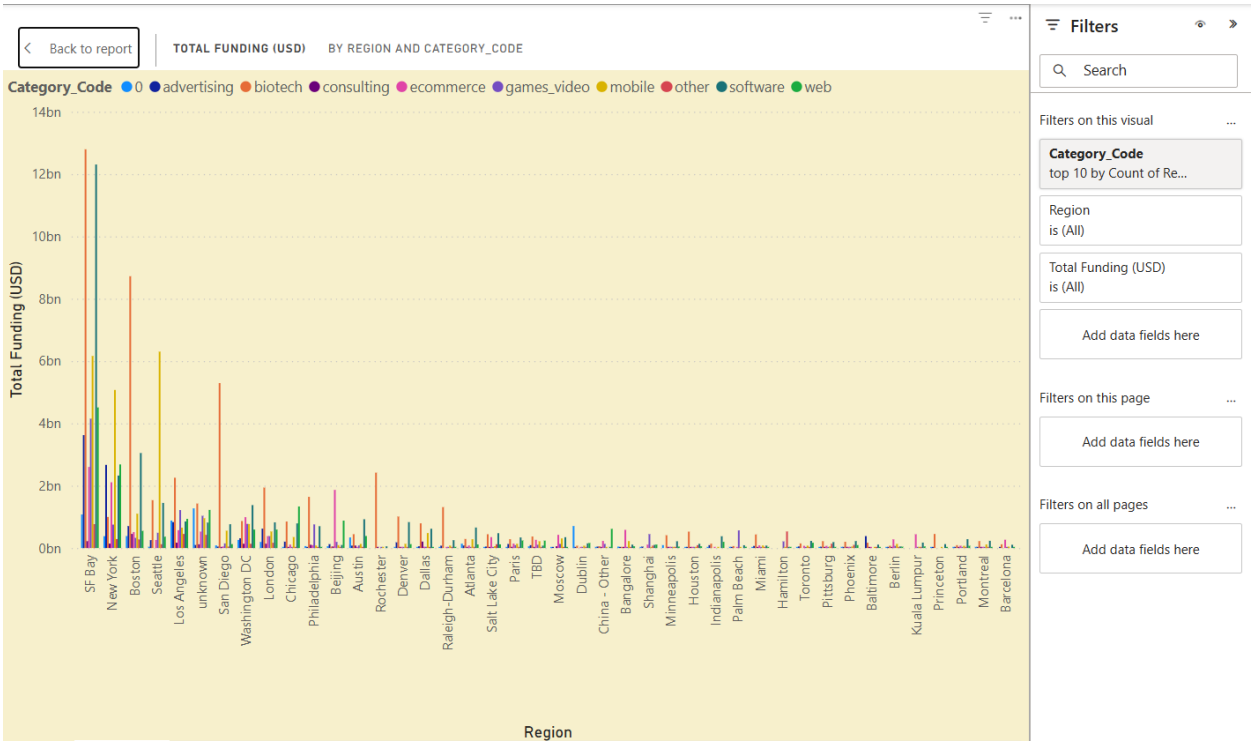
- **Bar Chart Title:** *Total Funding (USD) by Category_Code*



- **Top Funded Categories:**
  - **Software** leads the list, followed by **Web**, **Semiconductors**, and **Security**.
  - These sectors likely show the most promise or innovation potential, attracting significant investor interest.
  - Lower funding in categories like **Real Estate** and **Travel** might suggest either maturity or lower investor confidence in disruption.

5. Regional and Sectoral Breakdown

- **Bar + Line Combo Title:** *Total Funding (USD) by Region and Category_Code*



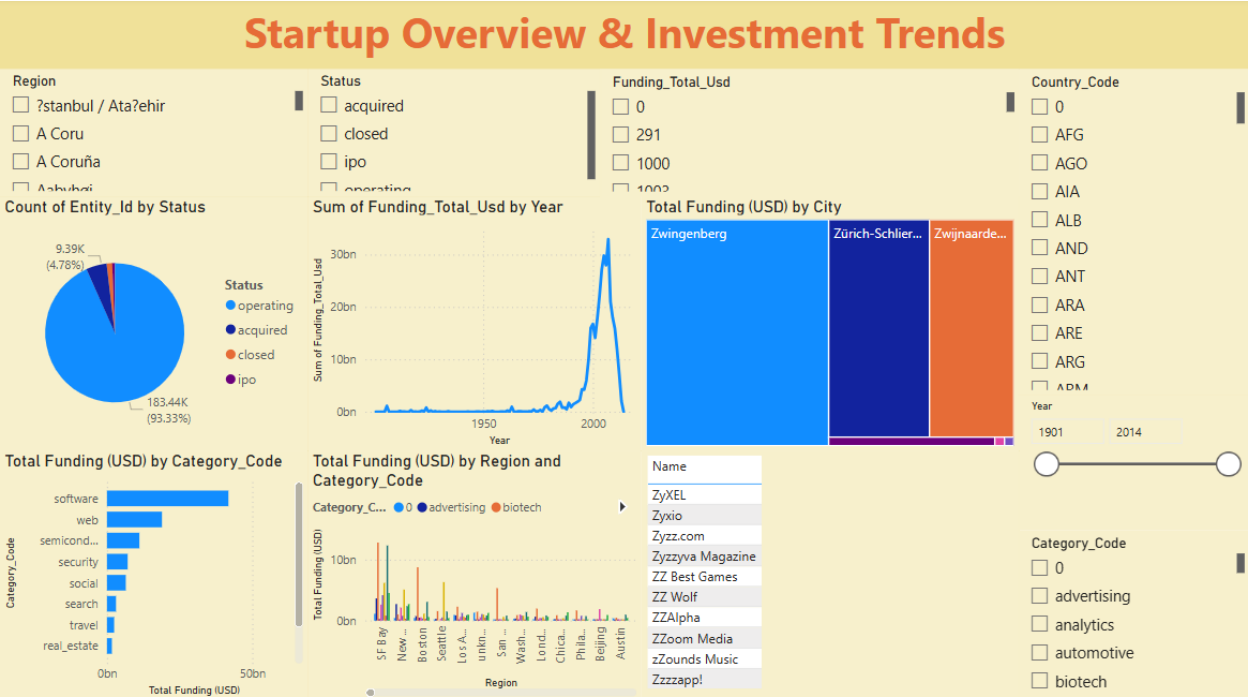
- **Insights:**
  - Regional funding distribution varies significantly.
  - Regions such as **New York**, **San Francisco**, and **London** (not completely visible) show higher levels of funding across multiple sectors.
  - Categories like **Advertising** and **Biotech** are visualized, but Software likely dominates across regions.
  - Offers a granular view of how specific industries perform across different geographic regions.

6. Filters & Segmentation Options

- **Available Filters:**
  - **Region**, **Status**, **Funding_Total_Usd**, **Country_Code**, **Year**, **Category_Code**.
- These filters support tailored insights, enabling stakeholders to dive deeper into specific countries, timelines, startup stages, and industries.

7. Startup Listings

- **List Title:** *Name*
- **Insights:**
    - Displays a scrollable list of startups starting with the letter "Z", e.g., **ZyXEL**, **Zyzz.com**, **ZZ Best Games**, etc.
    - Useful for quick lookup or benchmarking specific companies.



Conclusion:

The dashboard provides a comprehensive view of the startup ecosystem's health, funding trends, and regional performance. Key takeaways include:

- A strong majority of startups remain operational.
- Investment peaked during the early 2010s and has since declined.
- Technology sectors dominate funding.
- Investment is heavily concentrated in specific cities and regions.
