🟥 1. Title: "Startup Survival & Risk Assessment"

- **Purpose**: Indicates the overall theme—evaluating startup longevity, risk, funding, and return.

🟩 2. KPI Cards (Top Center - 3 Boxes)

- **Failure Rate (%) – 1.75%**
  Reflects the percentage of startups that failed (likely shut down) relative to the total in the dataset. Very low = high success rate.
- **Avg Operating Startup Age (Years) – 19.14**
  Shows how long startups remain operational on average, suggesting long-term sustainability.
- **Survival Rate (%) – 89.43%**
  High percentage shows that most startups either survived, got acquired, or had successful exits.

🟦 3. Dropdown Filter: ROI Category

- **Purpose**: Allows users to filter all visuals based on ROI (Return on Investment) category (e.g., High, Low).

🟨 4. Bar Chart: Count of Status by Category_Code

- **X-axis**: Count of startup status (operating, closed, acquired).
- **Y-axis**: Industry categories like software, web, ecommerce.
- **Insight**: Software startups dominate the dataset in volume.

🟧 5. Line Chart: Funding vs Closure Ratio (%) by Year

- **X-axis**: Year.
- **Y-axis**: Ratio of funding amount to number of closures.
- **Insight**: Shows funding effectiveness or risk year-over-year. Dips could indicate market corrections.

🟫 6. Tree Map: Count of Name by Category_Code

- **Purpose**: Visual representation of how startup names are distributed across sectors.
- **Size**: Indicates the volume of startups in each category.
- **Insight**: Ecommerce, advertising, biotech, and consulting have high startup counts.

🟪 7. Map Visual: Closed & Operating Startups by Region

- **Purpose**: Geographic distribution of startup statuses.
- **Colors**: Could indicate closed (red) vs operating (blue or green).
- **Insight**: Startup activity is global, not concentrated in one location.

⬜ 8. Table: Regional Startup Status Counts

- **Columns**: Region, acquired, closed, IPO, operating, etc.
- **Insight**: Gives detailed numerical breakdown by location.
- **Note**: Some data cells show "NaN", indicating missing or unrecorded values.

🟥 9. Bubble Chart: Funding vs ROI vs Survival Rate

- **X-axis**: Total funding in USD.
- **Y-axis**: Return on Investment (ROI).
- **Bubble Size**: Survival Rate (%).
- **Insight**: Indicates which funding levels bring the best ROI and highest survival.

🟩 10. Bar Chart: Pre-closure Funding Duration (Days) by ROI Category

- **X-axis**: ROI Category (High vs Low).
- **Y-axis**: Duration in days startups received funding before closure.
- **Insight**: Unusual **negative values** suggest data quality issues or incorrect calculations.

🟦 11. Filters at the Bottom

These slicers control all visuals for focused analysis:

- **Status**: Filter by current status (e.g., closed, operating, acquired).
- **Region**: Filter by geographical location.
- **Category_Code**: Filter by industry sector.
- **Founded_At**: Date range when startups were founded (1901 to 2014).
- **Funding_Total_Usd**: Range of total funding received.

✅ **Conclusion of the Dashboard Entities:**

This dashboard provides a comprehensive view of startup performance using KPIs, categorical and geographical breakdowns, funding patterns, and ROI comparisons. It empowers users to:

- Spot high-performing sectors,
- Understand funding and closure trends over time,
- Evaluate risk by region or ROI category, and
- Make data-driven investment or policy decisions.
